

P3-neutrare® 3000 Series

Demulsifying neutral cleaners

Longer bath lifetimes – lower process costs

Universally applicable products for cleaning of machined or formed parts made of steel, cast iron and light metal alloys by dipping or spraying.

Process

Cleaners in the P3-neutrare® 3000 Series have built-in demulsifying action. They eliminate the need for additives and continuous bath readjustment, thus simplifying the process chain.

Efficiency

Thanks to the new formulation, bath lifetimes are up to 100% longer than those achievable with conventional neutral cleaners. As a result, consumption is significantly reduced.

Quality

The P3-neutrare® 3000 Series assures constant bath quality. This minimizes the need for monitoring and helps to reduce costs.

Environment

The longer bath lifetimes reduce the cost of bath disposal by up to 50%. In addition, the P3-neutrare® 3000 Series is classified as only slightly water endangering* and complies with the Detergent Regulation**.

*(class WGK1) according to the German administrative regulation on water endangering substances

**Regulation (EC) No 648/2004 of the European Parliament and of the Council of 31 March 2004
